
New Product Development In China

TSI's engineering staff in Boa An China and the USA. can work with your Marketing & Engineering departments to co-develop products in accordance with your Product Specifications. We can work from existing engineering files, or from a simple solid model of the desired product, and create all of the engineering files for piece parts and the assembled product, as well as create a costed Bill-of-Materials.

We employ the following software in our engineering department:

Pro-ESolidWorksAutoCAD

TSI can create multiple options of product industrial designs, with unique and interesting looks and features, from which your marketing people can select the most desirable design for the product.

Once the product engineering is complete, TSI will produce functional rapid prototypes for User studies, and for functional testing prior to product tooling.
